

Instructions for Authors of Journal Club Submissions

The *Science Signaling* Journal Club features short, lively overviews by graduate students and postdoctoral fellows that highlight recent exciting developments in cell signaling research. Journal Club articles are intended to be accessible to a broad audience of readers, including scientists outside the Signal Transduction field. Journal Club submissions should focus on one or more recently published papers in the general context of a given field. Highlighted papers should have been published within the past six months, must be pertinent to some aspect of cell signaling, and may not derive from the same institution as the author(s) of the Journal Club article.

Submission to the *Science Signaling* Journal Club is limited to graduate students and postdoctoral fellows. Submissions may be written in the context of a graduate course or journal club or by individuals currently doing research in an area related to the topic under discussion. Multiple graduate student or postdoctoral authors may collaborate on a paper. Journal Club submissions written as part of a graduate course must be accompanied by a note from the instructor, giving the name of the course and explaining how the papers were evaluated. If student papers were subjected to a formal external review process, the reviewers' comments should accompany the submission. Journal Club submissions written outside of the context of a formal course must be accompanied by a note from the student or fellow's mentor, describing the research focus of the laboratory. Journal Club manuscripts may be sent for external review and will be evaluated by the editors for accuracy and content appropriate for publication at *Science Signaling*.

Format: Articles should be short and concise. Upper limits of 1500 words and 15 references will normally be applied. To be visually engaging as well as informative, each Journal Club paper should include one figure. Papers must have an Abstract, which will be submitted to PubMed. The 1500-word limit includes the Abstract, as well as the main text, but does not include the figure legend or the References.

Writing your Journal Club manuscript: The ideal Journal Club piece begins with an introductory paragraph that immediately presents the issues in a way that captures the reader's interest. The paper or papers under discussion should be mentioned in this first paragraph. Your introduction should be general enough to provide necessary background and orient the reader not familiar with the specifics of your field. Here, and throughout the article, you should avoid the jargon and special terms of your field or system. If the language of specialists is necessary, define terms for the general reader.

The body of the text should, in the limited space available, develop your discussion in a lively manner. By "lively" we don't mean hype and oversimplification. Rather, the editors seek clear, declarative writing that avoids the passive tense, tangled constructions, and needless detail.

The final paragraph should draw the piece to a concise conclusion, without simply restating the text. It should be a conclusion and not a summary, and should address future prospects and implications of the research, the unanswered questions that remain, and where the field going.

Headquarters

References, cited by consecutive numbers in the text, should be given in a full format. Avoid lengthy notes, details, or asides that interrupt the flow of the text.

The Figure: The figure should illustrate the essential message of the article. It can be a graph, chart, table, or photograph. The point is to catch the eye while informing the reader. If the figure has been previously published, it must be accompanied by a statement of permission to publish.

The Editor's Role: We expect that authors will do their best to meet our criteria for a good Journal Club article, but you should be prepared for extensive editing, perhaps even rewriting, if the editors find it necessary. The editors will show you the changes and you will be asked to check the galley proofs before publication.

Author Checklist for the *Science Signaling* Journal Club

Have you included an Abstract?	
Are all authors listed correctly along with their affiliations and the corresponding author indicated?	
Have you included at least one figure or table?	
Have any of the figures been previously published? If so, have you included the appropriate Permissions.	
Have you included legends for all figures and tables?	
Does your article have no more than one level of headings?	
Does your article cite 15 or fewer references?	
Are the references complete? Each citation should include full article title, journal title, journal volume, year of publication, and first and last page. Please include all authors (no <i>et al.s</i>).	

General Instructions for the Electronic Submission of Text and Figures

Please submit the text and figures through the *Science Signaling* Electronic Manuscript Submission Website (<http://www.submit2scisignal.org>). Simply choose the option “I want to submit a new manuscript to *Science Signaling*”.

If you have files that cannot be submitted through the electronic submission site, please email the *Science Signaling* editors at sciencesignalingeditors@aaas.org after you have submitted the main part of the manuscript electronically. Please include the Web Submission number that you will receive from the submission site in your email.

Text files should be compatible with Microsoft Word in .doc or .rtf format.

Figure files should be compatible with Macintosh computers Adobe Illustrator (version 3.0 to 9.0) and Adobe Photoshop (version 2.0 to 6.0). For details about preferred file types, see below in Figure File Formats. Figures must be at least 300 dpi. Figures prepared in PowerPoint will be redrawn by the *Science Signaling* art department to achieve the necessary resolution.

Movies and animations in Macromedia Flash, Quicktime, or animated GIF format are acceptable.

Detailed Instructions for Preparing Your Electronic Files

The maximum total file size for each manuscript submission is 6 MB (including figures and supporting online material) when using the electronic submission form. If larger figure files or supporting online material files are necessary, please contact the editors at sciencesignalingeditors@aaas.org.

Format all pages to 8.5" × 11" (standard U.S. letter-sized paper) with at least 1.25-inch or 3-cm margins. This can be done using the "Page Setup" command in most word processors and graphics programs. Please reformat pages from A4 to this size with these margins. PostScript files should be formatted for standard U.S. letter-sized paper. This will ensure that if we need to print a hard copy of your paper, it is formatted correctly.

Text

- Include text, references, figure captions, and all tables as part of a single text file.
- For best conversion, we recommend use of Times and Symbol fonts only.

Graphic files and figures

Figure files should be compatible with Macintosh computers Adobe Illustrator (version 3.0 to 9.0) and Adobe Photoshop (version 2.0 to 6.0). We can accept figures in the following formats (in descending order of preference):

- Illustrator EPS (Encapsulated Post Script) or AI (Adobe Illustrator),
- Photoshop PSD (Photoshop - with active text layers, do not flatten, do not rasterize text layers),
- PDF, TIF, PICT, JPG, GIF.
- Submit files prepared in Corel Draw or Macromedia Freehand saved as EPS's.
- Submit files prepared in PowerPoint as PPT files

Supporting Online Material

Please include supporting online text, tables, figures, and references at the end of the main manuscript file, in a separate section titled "Supporting Online Material," when it can be easily done and the total file size does not exceed 6 MB. Alternatively, Supporting Online Material can be included as a separate file that can be uploaded as the final figure file within the 6 MB upload limit. Only the file types listed above that are allowable for figures and text can be uploaded (.pdf, .ps, .prn, .doc, .wpd).

Please contact the editors at sciencesignalingeditors@aaas.org regarding submission of supporting online material that exceeds the 6 MB limit or that involves file formats other

Headquarters

than those we allow for WWW submission (such as video or audio files). For reference, please include the confirmation number you received during the upload of your paper on the correspondence regarding files that exceed the limit. Note that we cannot review your paper until we have received the supporting material.

Acceptable formats for videos are Quicktime, MPEG, and Flash. Keep videos short and the display window small to minimize the file size of the video. Supply caption information with the videos. Edit longer sequences into several small pieces with captions specific to each video sequence. Please note that audio and video files cannot be submitted through the online submission system. Please contact the editors at sciencesignalingeditors@aaas.org regarding submission of such file types.

How to Save Files in Acceptable Formats

We now convert most submissions including hard copies to PDF files for initial evaluation and review (and use hard copies where necessary). To ensure accurate conversion of manuscripts, we are able to accept only the following formats:

- .pdf (Adobe Portable Document Format)
- .ps (PostScript)
- .eps (Encapsulated PostScript)
- .prn (Printer file for a PostScript printer)
- .doc (Microsoft Word, version 6.0 and higher) – please note that we cannot accept files in Word 2007 (.docx) format.
- .wpd (WordPerfect, version 7.0 and higher)

Most applications can save files into one of these formats. Information about how to save in the acceptable formats can be found on the instructions for authors of *Science* manuscripts (http://www.sciencemag.org/about/authors/prep/prep_init.dtl#formats) and includes information about properly saving Word 2007 files and TeX and LaTeX files. Please send only one manuscript text file; figures should be either included in the text file or uploaded separately.

Naming Files

Our electronic submission form will only accept files with the correct extension designating the file type.

Name all files starting with the last name of the first author. Follow this by an indication of whether this is the text or the figure name. The file name ends with the extension.

Examples of acceptable file names are smithtext.doc smithtextfigs.prn smithfig1.eps smithtextfigs.ps smithms.ps smithsupp.pdf

Unacceptable file names are: smithfig1C.ps (each figure should be complete, not broken into parts) smithtext (all files should end in a file extension)

Citation Style

Symbols, abbreviations, and acronyms should be defined the first time they are used.

Headquarters

Units of measure should be given in SI units. If measurements were made in English units, give metric equivalents.

References and notes are numbered in the order in which they are cited, first through the text, then through the table and figure legends. List a reference only one time. Any references to in-press manuscripts or personal communications should be given a number in the text and placed, in correct sequence, in the references and notes. Such references should not, however, be used to support claims or conclusions. We do not allow references to unpublished data in support of claims or conclusions; necessary data should be included in the manuscript, its Supporting Online Material, or an approved archival database. The abbreviations for journal names are taken from the *Bibliographic Guide for Editors and Authors (BGEA)* or *Serial Sources for the BIOSIS Data Base (BIOSIS)*, a more recent publication. When in doubt, provide the journal's complete name. Spell out cities that are listed after a journal name: *Acta Zool. (Stockholm)*. Do not use op. cit., ibid., 3-m dashes, en dashes, or et al. (in place of the complete list of authors' names). For author names with Jr. or 2nd, etc. see example number 4 in the *Journals* section. Publisher's names are given in shortened form. "Press" and the like are usually dropped, except Academic Press ["Academic" is an adjective], University Park Press, CRC Press, MIT Press, and Cambridge Univ. Press [for university presses, to distinguish them from the university itself]. Only one publisher's location is needed. A few world-renowned cities (for example, Amsterdam, London, Philadelphia, Chicago, New York, Baltimore) can be listed without state or country; less well-known cities and those with names that could be confused take state abbreviations (Cambridge alone for the city in the U.K., but Cambridge, MA). Inclusive pages numbers or chapter number must be given when specific articles are referred to within an edited volume.
